portable

- Some like Word; some like WordPerfect.
- Most have Acrobat Reader . . .
- Others can get it for free.
- Ideally, PDF documents will look the same everywhere.

Why PDF?
Centralization

quality

- Looks great: scalable graphics and fonts print well and are attractive on screen.
- The medium provides sufficient accuracy for “dense” formats, e.g., business forms.

Centralization

data
services

- Why PDF?
- Centralization
- The Problem
- The Solution
- The Glue
- The Process
- Templates
- Examples
- Tips

data

With centralized data, advantages include:

- Easier collaboration
- Multi-point access via the web
- Data security through server backups

Why PDF?
Centralization
The Problem
The Solution
The Glue
The Process
Templates
Examples
Tips

services

With centralized services . . .

- Functionality is not limited by the software on the end user's machine
- Complexity is hidden from the user

Why PDF?
Centralization
The Problem
The Solution
The Glue
The Process
Templates
Examples
Tips

The Problem

- No PDF on the fly
Most of the time, users cannot get PDF documents that are generated from centralized, on-server data.
- GUI
Most PDF software is GUI-based and oriented toward interactive use.
- Server environment must be batch-oriented.
- Users often dislike learning new things.
- Long waits are confusing to users.
- Quicker service leads to greater acceptance.

Why PDF?
Centralization
The Problem
The Solution
The Glue
The Process
Templates
Examples
Tips

The Solution

- While pdf $\text{T}_{\text{E}}\text{X}$ can be used interactively, it is also well behaved in the batch processing environment of a server.
- The full power of $\text{T}_{\text{E}}\text{X}$ and friends is available for structured documents.
- The full power of PDF graphics is available with METAPOST.
- pdf $\text{T}_{\text{E}}\text{X}$ is very fast because Knuth was conservative with computer resources.
 - users are happy
 - server is happy

Why PDF?
Centralization
The Problem
The Solution
The Glue
The Process
Templates
Examples

The Glue

To make it work, we must glue things together.

One way is to use perl to glue the web server to $\text{T}_{\text{E}}\text{X}$ and friends.

- Why PDF?
- Centralization

- The Solution
- The Glue**
- The Process
- Templates
- Examples
- Tips

The Process

graphics

Overview:

- User comes to the web site
- User clicks something, and web server invokes perl
- Perl invokes pdf $\text{T}_{\text{E}}\text{X}$
- Perl serves PDF document to user and cleans up

Templates

example template

In creating source code for T_EX and METAPOST, we can do **text substitution** on **templates**.

Templates provide a simple and easy to maintain means for code generation.

online letter

An early use of pdf_TE_X as an engine for producing PDF documents for web users was a letter.

- User fills out HTML form that looks like the letter
- The data the user just supplied is stored in a database
- The user gets a PDF version of the letter, ready to print.

business forms

The University of Georgia's business office is notoriously picky when it comes to the forms that it will accept. If the form is not exactly the way they want it, they will not accept the form.

With pdf_TE_X and METAPOST working behind the scenes, we are able to produce extremely accurate reproductions of the Business Office's originals.

The staff use a web interface to enter data, retrieve data, and generate documents.

Figure 8.4 Summer Employment Voucher

lab schedules

Our department manages many computer labs. A coworker made a web interface for managing the labs. His code uses a perl module I wrote that uses a ConT_EXt backend to create lab schedules that we post.

The earlier solution used substitution on raw postscript. The postscript files were huge, and the results were flakey. Now everything just works!

ConT_EXt was chosen to manage the interdependent text and graphics.

Tips

- Redirect standard input for immediate failures ...
`pdftex foo < /dev/null`
... instead of hanging browsers!
- Use strange markers in templates,
e.g., `X-@foobar@-X` for “foobar”.
- Do all work in a cleverly-named temporary directory.
Use symlinks if available.
- Use plain format for documents with little structure.
